Parlodel (Bromocriptine)

Substance: Bromocriptine
Manufactured by: Novartis
Packaging: 28 tabs, each tab 5mg

Bromocriptine is a dopamine agonist drug (meaning it acts like dopamine in the brain), primarily activating the dopamine D2 receptors. It's main use is for the treatment of high prolactin, Parkinson's disease, and acromegaly; it was also used by bodybuilders in the 80's for it's GH releasing properties. However, it's metabolic effects are far greater than that.

Lately however, bromocriptine has gained prominence particularly on the World Wide Web as a weight loss agent. In genetically obese rats, bromocriptine normalizes metabolism and there are many good reasons to think it will do the same in humans. Bromocriptine has use during dieting (to minimize the negative adaptations), muscle gain when very lean, and may be beneficial post-steroid cycle. It may also be useful for diabetes treatment and may have pro-sexual effects.

Price and special offers:

Parlodel (Bromocriptine) (Novartis) 1 X box (28 x 5mg tabs)
