Fluoxymesterone (Haloplex) has poor binding to the AR. Studies have shown the effects to be mostly non-AR mediated. However, it is considered a very toxic oral drug, and a poor choice in most **bodybuilding/steroid** use applications.

The half life of **Fluoxymesterone (Haloplex)** is commonly misunderstood. The rumored belief is that 30-90 minutes is the half-life but this rumor is false, the half life of **Fluoxymesterone** is about 9.5 hours.

Substance: Fluoxymesterone
Manufactured by: Axiolabs
Packaging: 1 x 50 tabs (10mg/tab)

Fluoxymesterone (Haloplex) is an androgenic steroid that is only useful to a small select group of **athletes** who seeks very specific goals. Athletes tend to use it to increase strength and aggression in the gym or in competitions such as strongman contests, fighting (like boxing) or MMA. The lack of estrogenic activity makes **Haloplex** perfect for pre-fight usage – as weigh-ins would not be effected by water retention. Even in such an events, **Fluoxymesterone** usage is usually limited to mere few weeks rather then cycled like real **steroids** for months.

The sport of bodybuilding

The sport of bodybuilding The popular, growing sport of bodybuilding in the region is leading to bigger championships for local enthusiasts. Dana Ali, 31, who recently returned to Kurdistan from Britain, started lifting weights six year ago when he was abroad. "Oh, I became many pounds overweight," he said, taking a break after finishing the first set. "I see so many [overweight people] here, and I don't want to be like them. "I feel better and forget about all my problems when I come in and exercise," said Ali, having arrived straight from work wearing a black T-shirt and leather gloves. He works out five times a week and has shed most of his body fat; his chest and biceps are as thick as they were when he was living in Britain.
