[Anabolic Steroid Dianabol Turns 50](#)

The performance-enhancing drug Dianabol, which became the first widely used anabolic steroid and has built muscle for athletes and bodybuilders and become the subject of criminal prosecutions, was developed in 1958. There's a good piece in the New York Daily News looking at half a century of the steroid's use:

[Women On Prudent Dietary Pattern May Reduce Risk Of Death](#)

Women On Prudent Dietary Pattern May Reduce Risk Of Death Women who eat a diet rich in vegetables, fruits, legumes, whole grains, fish and poultry may reduce their risk of death from cardiovascular disease and all causes. Women who follow a traditional "Western" diet of red and processed meat, refined grains, fries and sweets may increase their risk. That's the

Substance: Fluoxymesterone
Manufactured by: Axiolabs
Packaging: 1 x 50 tabs (10mg/tab)

Fluoxymesterone (Haloplex) is an androgenic steroid that is only useful to a small select group of **athletes** who seeks very specific goals. Athletes tend to use it to increase strength and aggression in the gym or in competitions such as strongman contests, fighting (like boxing) or MMA. The lack of estrogenic activity makes **Haloplex** perfect for pre-fight usage – as weigh-ins would not be effected by water retention. Even in such an events, **Fluoxymesterone** usage is usually limited to mere few weeks rather then cycled like real **steroids** for months.

Fluoxymesterone (Haloplex) has poor binding to the AR. Studies have shown the effects to be mostly non-AR mediated. However, it is considered a very toxic oral drug, and a poor choice in most **bodybuilding/steroid** use applications.

The half life of **Fluoxymesterone (Haloplex)** is commonly misunderstood. The rumored belief is that 30-90 minutes is the half-life but this rumor is false, the half life of **Fluoxymesterone** is about 9.5 hours.

conclusion of researchers who reported the results of a Harvard School of Public Health study in *Circulation: Journal of the American Heart Association*. The study of 72,113 healthy women found that high adherence to the "prudent" dietary pattern was associated with a 28 percent lower risk of death from cardiovascular disease and a 17 percent lower risk of premature death from all causes when compared to the lowest adherence.
